FRAMIA

Photo outing planner

Light, weather and shooting spots on one page. Fill it in before you leave.

1. Idea

Subject in three words

If you can't say it, you don't yet know what you're looking for.

Date and place

Day, location, starting point.

2. Sun

Sunrise and sunset that day

From a sun calculator (for example SunCalc) for your location and date.

Which sides are lit, and when?

Low sun lights one side of your subject and leaves the other in shade: write down when your subject is in light.

Arrival time at the spot

At least half an hour before the light you want, to set up and choose the frame.

3. Weather (check it three times)

A few days before

Sky, wind, temperatures: only a trend.

The night before

What changed? Does the plan hold?

Before you leave

The last check decides whether to go, move or change subject.

4. Shooting spots and plans

Plan A: ideal light

Shooting spot, time, the frame you expect.

Plan B: overcast or flat light

A subject that works in soft light (forest, water, details) and where to find it.

Plan C: the place is not accessible

A nearby alternative, already marked on the map.

5. In the field

Gear

Charged batteries, empty cards, tripod, headlamp if you start in the dark, warm layers.

Safety

Who knows where you're going, when you expect to be back, your turn-around time.

6. Afterwards

What worked, what you'll change

One sentence for next time.

With Framia's AI Planning you can generate a plan with light times, weather, compositions and shooting spots. framia.site
